                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Submitted (JUN-1998) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Transcriptional activator that binds to the AT
sequence of the enhancer element of the AFP gene.
-!- SUBCELLULAR LOCATION: Nuclear.
-!- ALTERNATIVE PRODUCTS: 2 isoforms; A (shown here) and B;
produced by alternative splicing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pfam; PF00046; homeobox;

                                                                                                                                                                                                                                                                           embryonic day 16.

- IDISEASE: Defects in PCDH15 are the cause of the Ames waltzer (av) phenotype. It is characterized by deafness and a balance disorder. associated with the degeneration of inner ear neuroepithelia.
- i- SIMILARITY: CONTAINS 11 CADHERIN DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Woychik R.P.;

                                                                                                                                                                                                                                                                                                                                                                                                                                  SUBCELLULAR LOCATION: Type I membrane protein (By similarity).
TISSUE SPECIFICITY: Expressed in brain and sensory epithellum the developing inner ear. Also found in the spleen, developing eye, dorsal root ganglion, dorsal aspect of neural tube, floor plate and ependymal cells adjacent to the neural canal.
DEVELOPMENTAL STAGE: Highest level of expression is detected at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   FUNCTION: Calcium-dependent cell-adhesion F maintenance of normal retinal and cochlear inner ear neuroepithelial cell elaboration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             VFDYHSVTMQQ--LESIRNEGPEPHLAGDRPSKHLKLVFIRHCLRALRLPRISIDLMESP 178

## BLAST 2 SEQUENCES RESULTS VERSION BLASTP 2.2.3 [Apr-24-2002]

Mitogen-activated protein kinase 12 (Extracellular

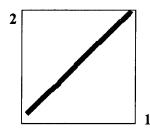

Sequence 1 gi 2851522 signal-regulated kinase 6) (ERK-6) (ERK5) (Stress-activated protein kinase-3) (Mitogen-activated protein kinase p38 gamma) (MAP kinase p38 gamma).

Length  $367 \frac{(1...)}{367}$ 

Sequence 2 gi 1136298 WIPK [Nicotiana tabacum]

Length 375  $\frac{(1...)}{375}$ 

NOTE: The statistics (bitscore and expect value) is calculated based on the size of nr database

Score = 292 bits (747), Expect = 5e-78
Identities = 149/339 (43%), Positives = 219/339 (63%), Gaps = 8/339 (2%)
